

## Bag Valve Mask Resuscitation (BVM)

The chance of survival for a patient who is not breathing or has suffered a cardiac arrest can be improved by the use of a bag valve mask (BVM) than rescue breathing can alone. This course teaches the student how to use a BVM safely and effectively on a patient who is either not breathing or has suffered a cardiac arrest.

*Course Content (Theory 10%, Practical 90%)*

- Overview of the types of BVMs available
- Checking the BVM prior to use
- Use of the BVM (practical)
